Professional Summary

Results-driven Software Development Engineer with over 3 years of experience designing, developing, and deploying scalable Java-based applications and full-stack solutions. Proficient in Java, Spring Boot, and cloud platforms (AWS, Salesforce, GCP), with a strong focus on building robust backend systems, RESTful APIs, and microservices architectures. Adept at leveraging Agile methodologies to deliver high-quality, performant software solutions, optimizing system efficiency, and driving business value through innovative development practices.

Technical Skills

- **Programming Languages**: Java (Spring Boot, Spring MVC, Spring REST, Hibernate), JavaScript (Node.js, TypeScript), Python, C#, Apex, SQL
- **Web Technologies**: HTML5, CSS3, JSON, React, Angular, Lightning Web Components (LWC), Tailwind CSS, Webpack
- **Frameworks & Libraries**: Spring Boot, Spring MVC, Spring Security, Spring Data, JUnit, Mockito, React, Angular, Express.js
- **Databases**: MySQL, MongoDB, PostgreSQL, Oracle, DynamoDB
- **Cloud Platforms**: AWS (EC2, Lambda, S3, RDS, CloudWatch, API Gateway), Salesforce (Community Cloud, Lightning Platform), GCP (Cloud Functions, BigQuery)
- **CI/CD & DevOps**: Git, GitHub, Bitbucket, Jenkins, Docker, Kubernetes, Maven, Gradle, Postman
- **Methodologies & Tools**: Agile/Scrum, SDLC, Jira, Confluence, Test-Driven Development (TDD), RESTful API Design
- **Additional Skills**: Microservices Architecture, Object-Oriented Design, Design Patterns, Performance Optimization, Code Review

Professional Experience

Graduate Assistant | University of Maryland, Baltimore County, Baltimore, MD | Jan 2024 – May 2025

- Developed Java-based automated grading tools using Spring Boot and JUnit, reducing grading time by 25% for 150+ students across networking and OS courses.
- Enhanced cybersecurity analysis by implementing Python scripts to detect vulnerabilities in student code submissions, improving feedback quality by 30%.
- Designed RESTful APIs to support course management systems, enabling real-time data access for faculty and students, increasing operational efficiency by 15%.
- Mentored students in Java programming and debugging, improving code quality and reducing error rates by 20% through hands-on guidance.
- Streamlined assessment workflows using Jira and Agile methodologies, boosting team productivity by 20% and ensuring timely delivery of academic reports.

Software Developer | MTX Group Inc, India | Sept 2021 – Jul 2023

- Architected and deployed Salesforce Community Cloud solutions using Lightning Web Components (LWC) and Apex, increasing user engagement by 25% through intuitive public and authenticated portals.
- Developed and optimized Java-based RESTful APIs using Spring Boot and Spring REST, improving data processing throughput by 30% for client-facing applications.
- Implemented microservices architecture with Spring Boot and Docker, reducing system latency by 20% and enabling seamless scalability for high-traffic applications.
- Automated deployment pipelines using Jenkins and GitHub Actions, cutting release cycles by 40% and ensuring zero-downtime deployments.
- Integrated Salesforce with external systems using REST APIs and middleware, streamlining data flows and reducing integration time by 25%.
- Collaborated with cross-functional Agile teams to deliver user-centric solutions, improving client satisfaction scores by 20% through iterative feedback cycles.

Projects

AI Icon Generation SaaS Platform

- Engineered a full-stack SaaS platform using Java (Spring Boot), React, and TypeScript, integrated with Hugging Face API to generate AI-driven icons from text/URLs.
- Developed scalable backend services with Spring REST and MongoDB, handling 10,000+ daily API requests with 99.9% uptime.
- Optimized UI/UX with React, Tailwind CSS, and Webpack, reducing user bounce rate by 15% through enhanced navigation and responsive design.
- Deployed application on AWS EC2 and S3, leveraging CloudWatch for monitoring, achieving 30% faster response times for image generation.

College Event Management System

- Built a full-stack web application using Java, Spring Boot, and ReactJS, serving 100+ users and reducing manual event management efforts by 60%.
- Designed RESTful APIs with Spring REST and MySQL, enabling efficient event scheduling, registration, and feedback collection for college stakeholders.
- Implemented CI/CD pipelines with Jenkins and Docker, reducing deployment time by 35% and ensuring consistent application performance.
- Enhanced security with Spring Security, implementing JWT-based authentication to protect user data and prevent unauthorized access.

Inventory Management System

- Developed a Java-based inventory tracking application using Spring Boot, Hibernate, and PostgreSQL, reducing stock discrepancies by 25% for a retail client.
- Integrated RESTful APIs with third-party logistics systems, improving order processing efficiency by 20% and enabling real-time inventory updates.
- Utilized Gradle for build automation and Kubernetes for container orchestration, ensuring high availability and scalability for 1,000+ daily transactions.

Education

Master of Science in Computer Science | University of Maryland, Baltimore County, Baltimore, MD | Aug 2023 – May 2025
Bachelor of Science in Computer Science | B.V Raju Institute of Technology, Hyderabad, India | Jul 2017 – Jun 2021

Certifications

AWS Certified Developer – Associate | Salesforce Certified Associate | Salesforce Certified Platform App Builder | Salesforce Certified Administrator (SCA) | Applied Generative AI Specialization, Purdue University
